

Empathy Map Template

Date	15 March 2026
Team ID	Batch 2023-27 ACOE
Project Name	Rising Waters – ML-Based Flood Prediction System
Maximum Marks	3 Marks

Primary User: Disaster Management Officer

The empathy map captures the thoughts, feelings, behaviours, and pain points of the primary user of the Rising Waters flood prediction system.

Quadrant	Key Insights
THINKS	"Will rainfall data be enough to predict flooding accurately?" "Can I trust the model output for critical decisions?" "How do I explain results to community leaders?"
FEELS	Anxious about missing a real flood event (false negatives). Relieved when system shows a clear No Flood result. Confident when model accuracy (95.65%) is displayed prominently.
SAYS	"We need faster predictions before monsoon season." "The system should clearly tell us what action to take." "We need a history log to review past predictions."
DOES	Manually collects rainfall data from weather stations. Enters readings into the 6-field prediction form. Shares flood/no-flood result with field teams. Logs predictions for audit.
PAIN POINTS	No centralized ML platform for flood risk prediction. Slow manual analysis delays emergency response. No emergency action guidance alongside predictions.
GAINS	Real-time flood risk classification in <2 seconds. 6 emergency action cards displayed on Flood Result page. Full prediction audit history with timestamps.
